## **AMENDMENTS TO THE CLAIMS**

The following listing of claims will replace all prior versions, and listing of claims in the application:

## **LISTING OF CLAIMS:**

1. A portable casing comprising:

a hollow body having at least one cavity defined in the body four sides, a bottom with four edges and four corners, and two cavities defined in one side of the body adjacent the bottom;

a whool holder securely-mounted in each respective one of the at least one cavity : and

holder including a base securely attached in a corresponding one of the cavities and a wheel mount pivotally coupled to the base, the wheel mount having a first side adapted for rotatably receiving a wheel and an opposing second side, the pivotal coupling being located adjacent one of the edges of the bottom and the wheel mount being displaceable from a first position within the corresponding cavity to a second position where the second side of the wheel mount is contiguous the bottom and the first side extends therefrom; and

two a wheels respectively rotatably mounted on each respective to the first side of a corresponding wheel mount of the wheel holders.

2. (Withdrawn) The casing as claimed in claim 1, wherein the body has four sides, a bottom with four edges and four corners and two cavities defined respectively in adjacent corners of the bottom; and

two wheel holders are respectively mounted in the cavities.

- 3. (Withdrawn) The casing as claimed in claim 2, wherein each wheel holder has an L-shaped base with two sides and two wings extending from the sides of the base to define a space for receiving a wheel; and
- each wing has a cutout to make the wheel exposed from the corresponding wheel holder.
- 4. (Withdrawn) The casing as claimed in claim 3, wherein a securing frame extends from one of the wings on each wheel holder and is securely attached to the body through fasteners.
- 5. (Withdrawn) The casing as claimed in claim 4, wherein each securing frame is L-shaped.
- 6. (Withdrawn) The casing as claimed in claim 5, wherein the securing frame on each wheel holder further has two ears respectively extending from two

sides of the securing frame and abutting against the body.

- 7. (Cancelled).
- 8. (Currently amended) The casing as claimed in claim [[7]] 1, wherein the cavities are defined in one side of the body near the bottom; and

each wheel mount is inverse U-shaped and has one end pivotally connected to the base.

- 9. (Withdrawn) The casing as claimed in claim 7, wherein the cavities are defined in the bottom of the body; and
- each wheel mount is inverse U-shaped and has a side pivotally connected to the base.
- 10. (Withdrawn) The casing as claimed in claim 1, wherein the body has four sides, a bottom with four edges and four corners and a cavity defined in one edge of the bottom; and
  - a wheel holder is mounted in the cavity.
  - 11. (Withdrawn) The casing as claimed in claim 10, wherein the wheel has

a length larger than half of a length but smaller than a complete length of the edge on which the wheel holder is mounted.
